

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (previously presented) A speech recognition system for recognizing spoken input received from a source of the spoken input coupled to the speech recognition system wherein the speech recognition system comprises:
  - a. input means for receiving the spoken input from the source of the spoken input;  
and
  - b. processing means coupled to the input means for performing a first pass according to a first speech recognition technique on the spoken input and for forming first pass results, wherein the first pass results define one or more preliminary matching speech expressions, further wherein the processing means selectively performs a second pass according to a second speech recognition technique which is not identical to the first speech recognition technique on the spoken input according to the first pass results.
2. (original) The speech recognition system according to claim 1 wherein the first pass results identify a speech expression as corresponding to the spoken input with a corresponding score.
3. (original) The speech recognition system according to claim 2 wherein when the score corresponding to the speech expression exceeds a predetermined threshold, the second pass speech recognition technique is not performed and when the score corresponding to the speech expression does not exceed the predetermined threshold, the second pass speech recognition technique is performed.
4. (original) The speech recognition system according to claim 3 wherein the second pass speech

recognition technique selects one of the speech expressions identified by the first pass results as corresponding to the spoken input.

5. (original) The speech recognition system according to claim 1 wherein the first pass results includes a graph that represents a number of alternative speech expressions.

6. (canceled)

7. (original) The speech recognition system according to claim 1 wherein a first pass speech recognition technique for a sentence received after the spoken input is omitted based upon results selected from the group consisting of the first pass results and a result of the second pass speech recognition technique.

8. (original) The speech recognition system according to claim 1 wherein a first pass speech recognition technique for a sentence received after the spoken input is selected based upon results selected from the group consisting of the first pass results and a result of the second pass speech recognition technique.

9. (original) The speech recognition system according to claim 1 wherein the first pass results identify a plurality of speech expressions as corresponding to the spoken input with each speech expression having a corresponding score.

10. (original) The speech recognition system according to claim 9 wherein when a difference between two highest of the scores exceeds a predetermined threshold, then the second pass speech recognition technique is not performed and when a difference between the two highest scores does not exceed a predetermined threshold, then the second pass speech recognition technique is performed.

11. (original) The speech recognition system according to claim 10 wherein the second pass speech recognition technique selects one of the speech expressions identified by the first pass results as corresponding to the spoken input.
12. (original) The speech recognition system according to claim 1 wherein a characteristic of the spoken input is identified based upon the first pass results.
13. (original) The speech recognition system according to claim 12 wherein the second pass speech recognition technique is selected from a plurality of speech recognition techniques according to the characteristic of the spoken input identified by the first pass.
14. (original) The speech recognition system according to claim 13 wherein the second pass speech recognition technique is selected while the spoken input is still being received by the input means from the source of the spoken input.
15. (original) The speech recognition system according to claim 13 wherein the second pass speech recognition technique is performed after the spoken input is received by the input means from the source of the spoken input.
16. (canceled)
17. (original) The speech recognition system according to claim 13 wherein the characteristic of the spoken input is a type of telephone channel a speaker of the spoken input is calling from.
18. (original) The speech recognition system according to claim 17 wherein the type of telephone channel is hands-free or not hands-free.

19. (canceled)
20. (original) The speech recognition system according to claim 1 wherein the first pass speech recognition technique attempts to select the second pass speech recognition technique as an appropriate one of a plurality of speech recognition techniques.
21. (original) The speech recognition system according to claim 20 wherein when the first pass speech recognition technique is not successful in determining which of the plurality of speech recognition techniques is most appropriate, multiple ones of the plurality of speech recognition techniques are performed.
22. (canceled)
23. (canceled)
24. (canceled)
25. (canceled)
26. (canceled)
27. (previously presented) A method of recognizing spoken input received from a source of the spoken input wherein the method comprises steps of:
- a. receiving the spoken input from the source of the spoken input;
  - b. performing a first pass according to a first speech recognition technique on the spoken input;
  - c. forming first pass results, wherein the first pass results define one or more

- preliminary matching speech expressions; and
- d. selectively performing a second pass according to a second speech recognition technique which is not identical to the first speech recognition technique on the spoken input according to the first pass results.
28. (canceled)
29. (original) The method according to claim 27 wherein the first pass speech recognition technique is selected from among a plurality of available first pass speech recognition techniques.
30. (original) The method according to claim 29 wherein the first pass speech recognition technique is selected from among the plurality of available first pass speech recognition techniques based upon prior spoken input.
31. (original) The method according to claim 29 wherein the first pass speech recognition technique is selected from among the plurality of available first pass speech recognition techniques based upon information obtained regarding a speaker of the spoken input.
32. (original) The method according to claim 27 wherein the first pass results identify a speech expression as corresponding to the spoken input with a corresponding score.
33. (original) The method according to claim 32 wherein when the score corresponding to the speech expression exceeds a predetermined threshold, the second pass speech recognition technique is not performed and when the score corresponding to the speech expression does not exceed the predetermined threshold, the second pass speech recognition technique is performed.
34. (original) The method according to claim 27 wherein the first pass results identify a

plurality of speech expressions as corresponding to the spoken input with each speech expression having a corresponding score.

35. (original) The method according to claim 34 wherein when a difference between two highest of the scores exceeds a predetermined threshold, then the second pass speech recognition technique is not performed and when a difference between the two highest scores does not exceed a predetermined threshold, then the second pass speech recognition technique is performed.

36. (original) The method according to claim 35 wherein the second pass speech recognition technique selects one of the speech expressions identified by the first pass results as corresponding to the spoken input.

37. (original) The method according to claim 27 wherein a first pass speech recognition technique for a sentence received after the spoken input is omitted based upon results selected from the group consisting of the first pass results and a result of the second pass speech recognition technique.

38. (original) The method according to claim 27 wherein a first pass speech recognition technique for a sentence received after the spoken input is selected based upon results selected from the group consisting of the first pass results and a result of the second pass speech recognition technique.

39. (original) The method according to claim 27 wherein the first pass results identify a characteristic of the spoken input.

40. (original) The method according to claim 39 wherein the second pass speech recognition technique is selected from a plurality of speech recognition techniques according to the characteristic of the spoken input identified by the first pass.

41. (canceled)

42. (original) The method according to claim 40 wherein the characteristic of the spoken input is a type of telephone channel a speaker of the spoken input is calling from.

43. (original) The method according to claim 42 wherein the type of telephone channel is hands-free or not hands-free.

44. (canceled)

45. (original) The method according to claim 27 wherein the first pass speech recognition technique attempts to select the second pass speech recognition technique as an appropriate one of a plurality of speech recognition techniques.

46. (original) The method according to claim 45 wherein when the first pass speech recognition technique is not successful in determining which of the plurality of speech recognition techniques is most appropriate, multiple ones of the plurality of speech recognition techniques are performed.

47. (canceled)

48. (canceled)

49. (canceled)

50. (canceled)

51. (canceled)

52. (original) A method of recognizing spoken input received from a source of the spoken input wherein the method comprises steps of:

- a. receiving the spoken input from the source of the spoken input;
- b. performing a first pass speech recognition technique on the spoken input;
- c. forming first pass results wherein the first pass results identify a speech expression as corresponding to the spoken input with a corresponding score and also identify a characteristic of the spoken input; and
- d. performing a second pass speech recognition technique on the spoken input when the corresponding score is below a predetermined threshold and wherein the second pass speech recognition technique is selected from a plurality of speech recognition techniques according to the identified characteristic.

53. (canceled)

54. (canceled)

55. (original) A method of recognizing spoken input received from a source of the spoken input wherein the method comprises steps of:

- a. receiving the spoken input from the source of the spoken input;
- b. performing a first pass speech recognition technique on the spoken input;
- c. forming first pass results wherein the first pass results identify a plurality of speech expressions as corresponding to the spoken input each speech expression having a corresponding score and also identify a characteristic of the spoken input; and
- d. performing a second pass speech recognition technique on the spoken input when a difference between two highest of the scores does not exceed a predetermined threshold and wherein the second pass speech recognition technique is selected from a plurality of speech recognition techniques according to the identified characteristic.

56. (canceled)

57. (canceled)

58. (previously presented) A method of recognizing spoken input received from a source of the spoken input wherein the method comprises steps of:

- a. receiving the spoken input from the source of the spoken input, wherein the spoken input includes at least a first utterance and a second utterance;
- b. performing a first pass according to a first speech recognition technique on the first utterance;
- c. identifying a characteristic of the first utterance;
- d. selecting a second speech recognition technique from a plurality of speech recognition techniques according to the identified characteristic;
- e. selectively performing a second pass on the first utterance according to the second speech recognition technique; and
- f. performing a first pass on the second utterance according to the second speech recognition technique.

59. (previously presented) A method of recognizing spoken input received from a source of the spoken input wherein the method comprises steps of:

- a. receiving an identifying characteristic from a speaker;
- b. receiving the spoken input from the speaker;
- c. selecting a first speech recognition technique from a plurality of speech recognition techniques according to the identifying characteristic;
- d. performing a first pass according to the first speech recognition technique on the spoken input; and
- e. selectively performing a second pass according to a second speech recognition
